MEMORANDUM FOR DLMS PROCESS REVIEW COMMITTEE (PRC) MEMBERS

SUBJECT: Proposed Defense Logistics Management System (DLMS) Change (PDC) 193,
DLMS Unit of Issue and Purchase Unit Conversion Guidelines
(Supply/Finance/Contract Administration/SDR)

We are forwarding the attached proposed change to DOD 4000.25-M, Defense Logistics Management System (DLMS), for evaluation and submission of a single coordinated Component position. This change potentially impacts all functional areas using DLMS transactions. The interface requirement relating to this proposed change is shown to assist in your internal coordination. However, omission of such a requirement does not relieve you of the responsibility to assure full coordination of the proposal within your Component.

Addressees may direct questions to the DLMSO points of contact, Ms. Ellen Hilert, Chair, Supply Process Review Committee, 703-767-0676, DSN 427-0676, or e-mail: ellen.hilert@dla.mil, or Mr. Joseph Pipan, 703-767-0680, DSN 427-0680 or e-mail: joseph.pipan.ctr@dla.mil. Others must contact their Component designated representative.

EDUARDO VICENCIO
Lt Col, USAF
Acting Director
Defense Logistics Management
Standards Office

Proposed DLMS Change 193
DLMS Unit of Issue and Purchase Unit Conversion Guide

1. ORIGINATOR: Chair, Supply Process Review Committee (PRC), Defense Logistics Management Standards Office (DLMSO), Ms. Ellen Hilert, Ellen.Hilert@dla.mil; DSN 427-0676, CPS 703-767-0676

2. FUNCTIONAL AREAS: Supply/Logistics, Procurement, Contract Administration, Distribution, Supply Discrepancy Report, Transportation

3. References:

- a. ASC X12 Draft Version 4, Release 1 (004010)
- b. ASC X12 Draft Version 4, Release 3 (004030)
- c. ASC X12 Draft Version 5, Release 1 (005010)
- d. ASC X12 Draft version 5, Release 3 (005030)
- e. DOD 400.25-M Defense Logistics Management System (DLMS) Manual, Volume 1, Section 5.3 (Version/Release) and Appendix 10D (Unit of Issue and Purchase Unit Conversion Guide)
- f. DLMS Unit of Issue/Purchase Unit to ASC X12 Unit of Measure Conversion Guide (Logistics Qualifier Code List *8), www.dla.mil/J-6/dlmsso/logdrms/logview/LQVQCrpt.asp (Attachment 1)

4. REQUESTED CHANGE:

- a. **Title:** DLMS Unit of Issue and Purchase Unit (UI/PU) Conversion Guide
- b. **Description of Change.** This change abolishes current and all future version/release restrictions for ASC X12 unit of measure codes used by DLMS for conversion to DOD unit of issue and purchase unit. This will allow unrestricted use of approved ASC X12 unit of measure codes in higher, more recent version ASC X12 releases (e.g. 005010/005030) and authorizes their usage in lower versions (e.g., 004010/004030). There are currently 17 such codes which are authorized for use in higher versions only. If approved, these and any future higher version codes may be used in all versions.
- c. **Background:** Section 5.3, Volume 1 of the DLMS manual states that “DLMS participants exchanging data should send and receive in the same “standard” version to assure the accuracy of the information exchanges”. Appendix 10D of the same manual

further states that the conversion guide must be employed to translate application program codes to valid ANSI ASC X12 codes for transmission. DLMSO has been advised that version release restrictions do not satisfy the requirements of several major interfacing systems and that the DLMS conversion guide for unit of issue/purchase unit to X12 code values is being used without any version release limitations.

d. Procedures: Implementation of this proposed change will remove the version release limitations from the guide and enable open usage of all conversion entries irrespective of version release. All future additions to the guide will also be made without any restrictions. All future additions will be published by administrative change using the DLMS Approved Change format. Revised procedures are at Attachment 1. The current Unit of Issue and Purchase Unit Conversion Guide is at Attachment 2.

e. Alternatives: Retain restrictions as documented.

5. Reason for Change:

a. Configuration Management. Elimination of version release restrictions precludes/eliminates extensive programming requirements to implement version control capability.

b. Substitute Codes. When forced to stay within the lower version, DLMSO selects a valid code from the X12 list to use as a substitute for the desired unit of measure code. The substitute code may be unrelated to the desired unit of measure. This practice of using one code to mean another may result in some confusion and would be unnecessary if the desired code is available at a higher version. There is also a small risk of needing the actual value of the chosen substitute code at a later date and it would already be in use for a different meaning. This problem is not unique to unit of measure, but the conversion table involved to obtain the DoD unit of issue may make it more unsatisfactory.

c. Standards Migration Impact. If this change is not approved, implementing systems in full compliance would be forced to migrate the entire transaction to the higher version to adopt one of the higher version unit of measure codes. This would be expensive, time-consuming, difficult to coordinate, and largely inappropriate for such as small benefit.

6. Advantages and Disadvantages:

a. Advantage: See paragraph 5 above. This change allows for speedy, low cost updates to implemented transaction exchanges. It allows implementing systems to support new business applications with minimal effort.

b. Disadvantage: Potential rejection of ANSI ASC X12 code values by Value Added Networks (VANs) or validation processes in Service/Agency automated systems. It

requires manual intervention to permit use of higher version codes as “local codes” within the lower X12 version.

Volume 1

C5.3 DLMS VERSION CONTROL.

C.5.3.1 Rules for Application of DSs to Federal ICs. The official ANSI ASC X12 version of a standard transaction set (e.g., 511) is a key ingredient in the successful application of DSs to ICs. The applicable version number is transmitted as a code in the functional group header within an interchange envelope. The version is transmitted as a three position *numeric* (e.g., 004). Each major ANSI ASC X12 draft standards revision involves a public review process that leads to a publication of a set of American National Standards causes the version number to increase by one. The predominant DLMS version is 004. The next three positions designate the release level within each version, i.e., 010. The release number of each version is identified by the second position of the release level. The initial DLMS implementation release is release one (010). Both version and release numbers are commonly referred to as a version release; e.g., ANSI ASC X12 version release 004010 (“4010”). The DLMS may eventually support multiple versions dependent upon trading partner requirements to include a minimum of the current version plus two previous versions. In addition, the DLMS will support multiple versions of DSs within each ANSI ASC X12 release. This layered version control schema will allow for documentation and control of DLMS changes that do not affect the structure of ANSI ASC X12 transaction sets or DLMS supplements, but are required for clarification and/or update of DSs.

C5.3.2 Exception Processing for ASC X12 Unit of Issue/Purchase Unit Codes. Version release restrictions cited in C5.3.1 above do not satisfy the requirements of several major interfacing systems involved in DLMS transactional interchanges. Accordingly, the restrictions limiting data exchange to the version release originally cited in the Unit of Issue and Purchase Unit Conversion Guide (Appendix 4) have been removed and are not applicable to the conversion of DoD unit of issue and purchase unit representations to X12 code values. Open usage of all conversion entries is allowed irrespective of version release. Further, all future additions to the Unit of Issue and Purchase Unit Conversion Guide (Appendix 4) will be published by administrative change using the DLMS Approved Change format.

(No changes to this Appendix – provided here for continuity.)

AP4. APPENDIX 4

DLSS/DLMS CONVERSION GUIDE

Three (3) sets of conversion guides contain a cross reference of DoD domain codes (data item codes) to ANSI ASC X12 domain code values. All three conversion guides must be implemented in DoD systems using ANSI ASC X12 transaction formats to convert DoD data value established in legacy system to the corresponding ANSI ASC Z12 code values. The applicable conversion guides are:

LOGISTICS QUALIFIER CODE LIST

QUALIFIER CODE:

*8

NAME: UNIT OF ISSUE AND PURCHASE UNIT CONVERSION GUIDE (UNIT OR BASIS FOR MEASUREMENT) (DOD CODE SEQUENCE)

ALIAS: UNIT OF ISSUE AND PURCHASE UNIT CONVERSION GUIDE (UNIT OR BASIS FOR MEASUREMENT)

DEFINITION: THE DLMS CONTINUES TO SUPPORT THE LEGACY CODE STRUCTURE "UNIT OF ISSUE" USED IN THE DEFENSE LOGISTICS STANDARD SYSTEMS (DLSS). SPECIAL PROCESSING IS REQUIRED AT THE POINT OF INPUT TO CONVERT THE ANSI ASC X12 "UNIT OR BASIS FOR MEASUREMENT " CODE VALUE TO THE DLSS LEGACY CODE VALUE AND AT THE POINT OF OUTPUT TO CONVERT THE DLSS LEGACY CODE VALUE TO THE ANSI ASC X12 CODE VALUE. BOTH THE SENDER AND RECIPIENT MUST USE THE CONVERSION GUIDE. THE ANSI ASC X12 CODE VALUES LISTED BELOW ARE ASSIGNED UNDER DATA ELEMENT 355, "UNIT OR BASIS FOR MEASUREMENT CODE".

REMARKS: REFER TO DEFENSE LOGISTICS MANAGEMENT SYSTEM (DLMS) MANUAL, DOD 4000.25-M, VOLUME 1 (C8.1.5) AND VOLUME 2 (C4.2.2.4). (ALSO SEE CONVERSION GUIDES **8 FOR X12 SEQUENCE AND *8* FOR ALPHABETIC NAME SEQUENCE).

DATA CODE CHARACTERISTICS: TYPE: ID MIN: 002 MAX: 0002

NAME/DEFINITION	DOD CODE	X12 CODE
-----------------	----------	----------

SPECIAL NOTE

ALL X12 CODE VALUES WITHOUT TRAILING ASTERISKS (*) HAVE BEEN APPROVED BY THE ASC X12 COMMITTEE AND ARE AUTHORIZED FOR USE IN ALL VERSION RELEASES OF ANSI X12. A SINGLE ASTERISK (*) INDICATES THAT X12 CODE VALUES ARE AUTHORIZED FOR USE IN VERSION RELEASES 005020 AND ALL SUBSEQUENT VERSIONS. THE X12 CODE VALUES FOLLOWED BY A DOUBLE ASTERISK (**) HAVE BEEN APPROVED FOR VERSION RELEASE 005030 AND ALL SUBSEQUENT VERSIONS.
